

RISC-V arch test

Module: Privileged spec

Task 2

Test Description:

This test starts in the Machine mode and then configures the memory using pmp, after configuration, test switches to the machine mode and tests the load store and access instrs on memory configured using PMP, after testing it in supervisor mode, there is an ecall instr that helps to switch back to machine mode and then these load, store and access instrs are tested in the machine mode as well.
